

DOCUMENT aide video Greenworks lawn mower

<https://www.youtube.com/watch?v=sEQVu1D7iQI>

00 – 00:12 What is the cutting width and voltage?

The cut is 21 inch and the voltage = 80volts

00:23 – 00:27 How many cutting height settings are there?

Seven level height adjustment

What are the advantages?

00:15 - 00:17 Without external costs no hassle and maintenance

00:27 – 00:36 Zero emissions, sixteen times less noise than combustion “gas” engine

00:49 – 01:02 Versatility, move quickly the battery to other devices with the same voltage.

00:37 – 00:40 What type of electric motor is used?

Brushless motor

Mulch, rear bag, and side discharge

Mulching: *In ecological horticulture, mulch refers to organic matter – such as leaves or grass cuttings that is applied to the soil to protect it and supply it with nutrients. A special cutting blade must be used*

Rear bag: *To recover the lawn (grass) and make compost*

Side discharge: *Side discharge mowers are the classic mowing choice. They provide a great cut but are generally messier than mulching mowers.*
