

London, October 2nd 1872.

Like every day, Phileas Fogg is going to his club.

Reading his newspaper, he discovers he can go around the World in eighty days.

-He leaves London at 8:45 p.m. on October 2nd

- he must be back by the same time, eighty days later, on December 21st 1872 at 8:45 p.m. local time.

-Phileas Fogg is a time maniac who likes to be punctual!

His project and departure make headlines in the newspapers. Fogg is the first suspect for the Bank of England robbery and so he wants to escape. That's why Inspector Fix goes in search of him around the world.

On December 21st, 1872, Fogg is back at St Pancras Station.

He looks at the clock

He starts panicking!

So, he looks at his watch and at the same time he can see Kings Cross Station clock.

Fogg's watch

Kings Cross Station

At the same time, in London, Inspector Fix can see these three clocks.

Little Ben

Big Ben

a clock in a street

So we have 6 different clocks and 6 different times!

Then Inspector Fix investigates and learns that:

- A clock is running fast by 5 minutes.
- Another clock is running fast by 35 minutes
- A third watch is 5 minutes slow.
- Three clocks are stopped!

Is Fogg's challenge a success?
